Abstract of JP2000023802

PROBLEM TO BE SOLVED: To provide commodity display unit for securing smooth and automatic feed forward corresponding to commodities, reducing the number of components, facilitating remodeling, eliminating a useless space and reducing stocks as well.

SOLUTION: This unit is composed of a commodity feed forward machine 5 provided with an operation mechanism 4 for moving the commodities on a feed forward main body 2 to a side determined as a commodity take-out part A or B by a component of force acting due to gravity and in which the feed forward main body 2 is provided with a size capable of mounting the commodities of plural columns, a partition plate 6a freely attachable and detachable to/from the commodity feed forward machine 5 and parallelly movable in a state of being attached to it and a commodity falling prevention tool 7 provided near the commodity take-out part A or B for preventing the falling of the commodities. Thus, when the commodities are mounted on the feed forward main body 2 for the plural columns and the partition plate 6a is set corresponding to the size of the respective commodities, the commodities on the feed forward main body 2 are moved along the partition plate 6a to the side of the commodity take-out part A or B by the operation mechanism 4.
